

Yhil — Paint Layer Journal for Minis

Snap the coat. Tag the code. Watch your kit level up — one layer at a time.

Yhil is your on-bench painting journal for garage kits, Gunpla, mechas, and minis. Every primer, shade, highlight, and weathering pass gets a photo, a paint code, and a place on your timeline — so you never lose “how did I get that color?” again.

Build your coat story

Log layers day by day. Filter by part, coat type, or technique. Name heads, arms, weapons — then jump straight to the coats that matter.

See the glow-up

Mark before & after on the same part and flip between them. Export the comparison when you want proof that depth actually happened.

Grow a paint shelf that knows you

Browse built-in brands and codes, add your own, and watch My Paints fill up as you work.

Quick tips on how to use and clean each system stay with the bottle on your shelf.

AI that stays on your phone

Snap a coat or a label — on-device Vision suggests layer type, techniques, and color candidates, and can match your local paint shelf. Everything is editable. You’re still the painter.

Workshop vibes, zero noise

Pin projects to the bench, track streaks and coat stages, get dry-time nudges before the next pass, and export palette cards as PNG or PDF. No account. No feed. Your photos stay on device by default.

One layer, one reference.

Open the bench. Begin today’s coat.
